

MUHAMMAD ANAS

Frontend-Focused Full-Stack Engineer

anashamza457@gmail.com | +92 346 6273186 | Pakistan (GMT+5)

LinkedIn | Portfolio

SUMMARY

Frontend-focused Full-Stack Engineer with 4+ years of experience building production web applications and delivering 15+ client projects. Currently developing frontend features for an AI-powered SEO platform serving 5,000+ agencies, working on AI-powered content and image generation, SEO analytics, and integrations including Google Search Console, Google Analytics, Google Business Profile, keyword rank tracking, and domain metrics. Strong expertise in React, TypeScript, and Next.js, with a focus on scalable component architecture, rendering strategies, and performance optimization. Comfortable working across the full stack with Node.js, Express, and SQL/NoSQL databases.

EDUCATION

The Islamia University of Bahawalpur

2021 – 2025

Graduate in Computer Science | CGPA: 3.85 / 4.00

SKILLS

Languages	JavaScript, TypeScript, HTML, CSS, SQL
Frontend	React, Next.js (App Router), Remix, Redux, MobX, React Query, Zod, Tailwind CSS, Ant Design, SCSS, Bootstrap
Backend	Node.js, Express, NestJS, REST APIs, GraphQL
Databases	MongoDB, PostgreSQL, Firebase, Supabase
Tools	Git, GitHub, GitLab, CI/CD, Jira, Linear, Stripe, PayPal
Practices	Component architecture, SSR & code-splitting, state management, RBAC & feature gating, performance optimization

EXPERIENCE

Enigmatix | Frontend-Focused Full-Stack Engineer

2023 – Present

- Drive frontend delivery for a large-scale, AI-powered SEO SaaS platform serving 5,000+ agencies and 430K+ installations.
- Own the end-to-end Pricing & Subscription system, covering multi-tier plans, feature gating and RBAC-aware UI, from API integration through to the screens users convert on.
- Engineer a reusable component architecture with React, TypeScript, MobX and Tailwind, cutting duplication and speeding up feature work across the product.
- Architect the frontend on Next.js App Router with dynamic routing, nested layouts and SSR, and improve performance ~25% through code-splitting, lazy loading and render control.

PROJECTS

AI-Powered SEO Platform | AI SaaS

- Delivered production frontend features for an AI-powered SEO SaaS used by 5,000+ agencies, including the multi-tier Pricing & Subscription system and conversion-focused workflows such as press-release generation.
- Built on a reusable component architecture with TypeScript, React, MobX, Next.js, Tailwind and Ant Design over REST APIs.

Office Management System | Internal Tooling

[Live]

- Built the frontend for a role-based office management system covering employee records, authentication flows, attendance tracking and task management on a Firebase backend.
- Scalable component architecture and a fully responsive, mobile-first UI. React, Firebase, Redux, Ant Design, SCSS.

HottoCare | Healthcare Platform

- Built a patient management application with full CRUD over patient records, secure authentication, protected routes and session management.
- Integrated GetStream.io for real-time doctor-to-doctor messaging. Svelte 5, SvelteKit, Tailwind, shadcn/ui, Flask.

DragonFly | Content Publishing Platform

- Built server-side rendered pages with Remix loaders and actions, applying caching strategies and progressive enhancement for fast page performance.
- Integrated REST APIs for real-time content updates, with Zod for schema validation. Remix, FastAPI, Zod, Tailwind.

Product Management System | Self-directed Full-Stack

- Built a product and customer management system end to end, covering catalogue, customer records, search and detail views, on a data model and API I designed myself.
- Remix front-end with Tailwind, Supabase for database and auth, Zod validating across the client-server boundary.
